

CFO Decision Intelligence

A Proof of Concept Without ERP Access

Build a complete CFO Decision Intelligence prototype using publicly available financial, macroeconomic, and market data — no sensitive corporate data required.

RECOMMENDED POC THEME

Manufacturing CFO Copilot

Targeting manufacturing organizations, this use case frames the core decision:

"What will be the impact of commodity prices, FX movements, and market demand on revenue, EBITDA, and cash flow over the next quarter?"

Forecasting

Forward-looking revenue & margin projections

Scenario Narrative (AI Generated)

This scenario assumes higher steel prices (+10%), INR depreciation (+5%), and weaker auto demand (-8%).

These factors collectively reduce EBITDA by ₹36 Cr (-20.2%) in May 2025, primarily due to higher raw material costs and lower volumes.

The impact partially offsets over the next few quarters as pricing actions and cost optimization take effect.

View assumptions & notes →

MODULE 4

Scenario Engine

The CFO inputs assumptions; the system instantly computes P&L and cash impact — often the **"wow factor"** in executive demos.

Inputs

Steel Price +10% · USD/INR +5% · Demand –8%

Outputs

Revenue Impact · EBITDA Impact · Cash Impact

MODULE 5

Monte Carlo Engine

Simulate simultaneous volatility across commodities, FX, and demand to produce probabilistic EBITDA ranges — replacing point estimates with confidence-weighted outcomes.

[Quick Start Guide](#)

Hello CFO! How can I help you today?

You can ask questions in natural language. Examples:

Why is EBITDA expected to decline in Q2 FY25?

What is our cash position in 13 weeks?

Impact of steel price increase by 10%?

Which factors are driving working capital?

You 9:41 AM

Why is EBITDA expected to decline in Q2 FY25 compared to Q2 FY24?

CFO Copilot 9:42 AM

EBITDA is expected to decline by ₹36 Cr (-18.6%) in Q2 FY25 compared to Q2 FY24.

Here are the key drivers:

Driver	Impact (₹ Cr)	Impact (%)	Explanation
↓ Steel Price Increase	-24.3	-13.6%	Hot rolled coil prices up 12% YoY increasing raw material costs
↓ Auto Demand Index	-12.6	-7.1%	Lower auto production and slower OEM order book
↑ Aluminium Price Benefit	+9.4	+5.3%	Aluminium prices down 8% YoY reducing input costs
↓ Power Cost Increase	-6.2	-3.6%	Higher power tariff and lower operating leverage
↑ FX Benefit (USD/INR)	+3.1	+1.7%	INR depreciation improved export realizations
Total Net Impact	-36.0	-18.6%	

Would you like to see a detailed variance bridge or explore a what-if scenario?
